About UIDAI DMS Initiative

UIDAI has taken initiative for creation, operation and maintenance of Infrastructure for physical storage of Consent letter and accompanying documents pertaining to Proof of Address and proof of Identity produced by residents during Aadhaar Enrollment and their conversion and storage into digital format. The proposed infrastructure called the “Aadhaar Document Management System” for UIDAI will have following features:

- a) Physical storage of Consent letter and accompanying documents produced during enrollment process.
- b) Scanning & conversion of physical forms and documents into digital/electronic formats and proper storage supported by state of the art Document Management System.
- c) Easy, convenient, safe & secure retrieval of original forms & documents when needed.

This project will ensure all the sensitive documents pertaining to residents are kept in a secured environment and maintained by UIDAI for any future retrieval. In order to ensure timely execution of this project, UIDAI has formulated a process enlisted in this document for Registrars.

Basis of Pickup

The pickup unit will be on the basis of batch ID

1 EID set of documents = All papers for an individual

1 Batch = EID Sets from a single machine with recommended size of 250 EID sets

1 Pickup will consist of 1 Manifest consisting of 50000 EID sets (approximately, +/- 10%)

Role of Registrars

Documents produced by residents are handed over during enrolment process to the enrolment agency appointed by registrars and later the same documents are submitted back to registrars for further processing and storage.

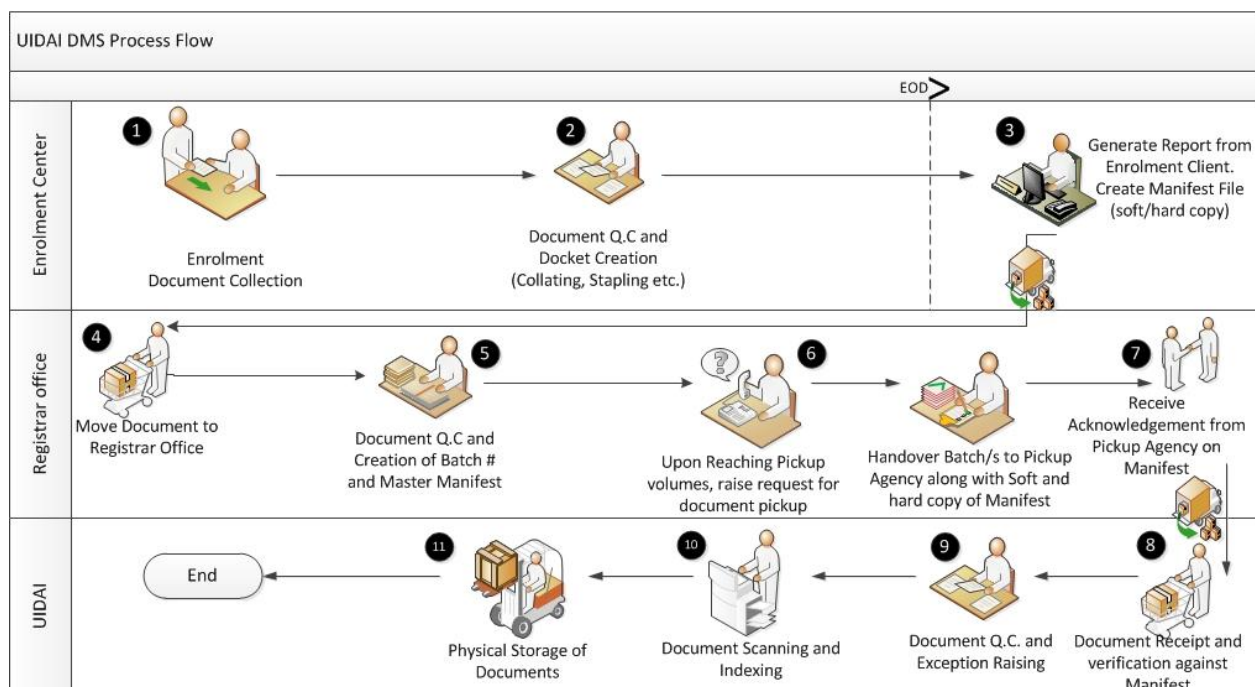

Registrars are responsible for collecting and securely storing all the documents submitted by residents during enrolment till the UIDAI appointed DMS service provider collects document from registrar offices and provide receipt of the same. Registrar may authorize enrolment partner to handover the documents directly to DMS Agency for physical pickup. However the Registrar holds the responsibility for coordinating the same with all other terms & conditions for pickup mentioned in this document. Following table describes the roles and responsibilities of registrar.

Legend P = Primary Responsibility, S = Secondary Responsibility

Sr.No	Description / Task	Registrar	UIDAI DMS Agency
1	Share the addresses & contact details (name, designation, email id & telephone no.) for each pickup location	P	
2	Collect correct documents from Residents during enrolment (Consent Form, POI, POA etc.)	P	
3	Ensure clarity and quality of submitted document.	P	
4	Create docket per enrolment containing j) Consent Letter k) POI Document l) POA Document m) Any other relevant document	P	
5	EA will ensure that complete set of	P	

	documents for any individual are stapled together to form a EID set.		
6	File dockets in the same order of enrolment and tally with report generated by Enrolment client software (LIFO)	P	
7	Prepare manifest document (Annexure2) alongwith the pickup list prior to pickup	P	
8	Upon accumulation of 50000 EID sets (+/- 10%) batches at one site (DHQ), send intimation to DMS service provider for pickup of documents along with CSV File.	P	
9	Takeover of boxes containing documents from Registrar / EA (authorized by Registrar) and obtain sign-off. The Pickup will happen on the basis of count of batches. Any discrepancy will be identified post scanning stage.	S	P
10	Perform quality check and provide feedback to registrar on any exceptions (eg. Quality of document, missing page in docket etc.) post scanning		P

Enrollment Document Handover process

1. The documents are submitted by residents at the time of enrolment. Based on type of enrolment ,a resident may submit one or more of the following supporting documents for verification:
 - a. POI
 - b. POA
 - c. DoB (in case of verified Date of Birth)
 - d. PoR (In case of HoF based enrolments)
2. Consent Letter, that is printed at the end of enrolment and is signed by the enrolled resident, is a document that is must for every enrolment irrespective of the type of verification used.
3. At the time of entering data into the enrolment client and capturing biometrics of the resident, the operator performs a quick quality check of the documents submitted by resident for clarity, readability and verifies whether the documents pertains to the same person. Post verification by operator as well as resident enrolment is concluded.
4. Post capture of demographic and biometric data into enrolment client, enrolment is concluded and a consent form is generated along with enrolment receipt. The receipt is handed over to the resident and consent letter is kept along with the document submitted by resident.
5. A docket for UIDAI is prepared by the operator comprising of following documents
 - i. POI
 - ii. POA
 - iii. DoB (in case of verified Date of Birth)
 - iv. PoR (In case of HoF based enrolments)
 - v. Consent Form with sign or thumb impression of enrollee (resident)
6. In case of KRY+ form, EA need to separate the papers required by UIDAI as a different set other than the additional papers required by registrar for each enrolment. They will handover only UIDAI required set to DMS Service provider as part of the pickup.
7. Each docket is properly stapled and kept aside for transporting to registrar office/designated consolidation point (DHQ)
8. Batch Generation process: EA will create a physical batch by collating EID sets from a single machine, with a recommended size of 250 EID set per batch. Enrollment software will provide an option to print a Pickup list for each batch. It will also create a CSV file to be sent alongwith pickup request. EA will put all the EID sets of each batch in one box/polythene cover and keep it ready for pickup till a total of 50000 EID sets (+/- 10%) are accumulated at DHQ location. While generation of batch, if batch size becomes more than 250, the enrolment software will generate an alert to resize the batch by giving a different date range.

9. Once 50000 EID sets are ready, the EA informs Registrar about accumulation of docs. They will bring docs from all enrolment locations - sub district, taluka, village etc to DHQ either at Registrar's office in DHQ or their office at the same DHQ. The frequency of document movement from enrolment centers to registrar office will be decided by registrar. In case a particular DHQ has not been able to organize 50000 EID sets for more than 2 months, a separate request will come from registrar to pickup the lot accumulated over this period. Such a pickup will be organized on an exception basis and may wait till a nearby DHQ / Registrar is ready for pickup so that they can be clubbed together.
10. Upon receipt of documents / information on pickup readiness from enrolment centers, registrar office staff will perform quality check on the physical documents and will create batches as per following guidelines –
11. Each batch is a collection of EID sets from a single machine with an upper limit of 250 EID dockets (approximately 1000 pages)
12. Each batch is arranged in box or bundle, accompanied by a hard copy of the pickup list (annexure 1) printed directly from the software kept inside the box/polythene cover. Each Pickup is defined as 50000 EID Sets(approximate, +/- 10%), and a manifest cum declaration form is created per pickup (refer to Annexure 2)
13. A pickup request from registrar will be issued only when there is an accumulation of 50000 EID set(approximate, +/- 10%) from a single DHQ location and corresponding csv files are ready .
14. Upon verification of manifest and count of batches, there will be a Joint signoff on the Manifest. EA officials can signoff on the same incase of pickup from the EA's site. Any discrepancies in the count will be noted in the manifest. However final reconciliation will be done post scanning & a discrepancy report will be generated for Registrar/UIDAI /HP.
15. Upon receipt of documents at scanning center, verification of batches and manifest is done and exceptions are raised in case of mismatch.
16. Documents Q.C. is done and exceptions are raised if required.
17. Documents are scanned and indexed as per UIDAI requirements
18. Documents are securely stored for future retrieval

Details of Preparation by Enrolment Agency:

1. A docket is prepared by the operator comprising of following documents
 - a. POI
 - b. POA
 - c. Consent Form with sign or thumb impression of enrollee (resident)
 - d. Consent Form will be always kept as the first page of each set.

2. Each docket is properly stapled and kept aside for transporting to registrar office/consolidation location at DHQ
3. Batch Generation process: EA will create a physical batch by collating EID sets from a single machine, with an upper limit of 250 EID set per batch. Enrollment software will provide an option to print a Pickup list for each batch. It will also create a CSV file to be sent alongwith pickup request. EA will put all the EID sets of each batch in one box and keep it ready for pickup till a total of 50000 EID sets (+/- 10%) are accumulated at DHQ location
4. Once 50000 EID sets (+/- 10%) are ready, the EA informs Registrar about accumulation of docs. They will bring docs from all enrolment locations - sub district, taluka, village etc to DHQ either at Registrar's office in DHQ or their office at the same DHQ. The frequency of document movement from enrolment centers to registrar office will be decided by registrar.

Details of Intimation & Pickup Scheduling:

Registrar will log their request for a pickup using any of the channels eg. Email or on Portal when a minimum of 50000 EID sets (+/- 10%) are ready.

CSV files (annexure 1A) for all Batches of a pickup must be zipped together & uploaded on the portal or sent by email to complete the pickup initiation request. CSV file name will be auto generated same as batch ID. It will get uploaded in portal database .Upon receipt of request and Pickup list softfile, DMS Service Provider will confirm Pickup schedule with date and time alongwith the Pickup request ID (Registrar code / DHQ code / Sequence no.) An automailer may be sent to inform Registrar about the same. Pickups should be scheduled to be executed within 7 days of intimation & receipt of Pickup list Softfile whichever is later.

In case of pickup from the EA's site, the Registrar must authorize & coordinate the pickup schedule & ensure the readiness of the Batches as mentioned.

Details of Pickup Process:

1. Pick up points will be the District Headquarters in the state (refer to annexure 5), these locations needs to be designated in advance and shall not be changed for without prior notice and approval from UIDAI.
2. The DMS Service Provider will report at the pickup location with proper ID Proof (of UID AADHAR DMS Project)

3. The Registrar/EA will prepare the Manifest (Annexure 2) in duplicate, with box-wise details. A joint signoff will happen with name, designation, seal of the company. EA officials can signoff on the same incase of pickup from the EA's site. This document will also serve as a declaration for transporting documents.
4. The DMS Service Provider will transport the documents to the storage location in a secured way.
5. The DMS service provider will be thereafter responsible for storage & preservation of documents for prescribed period as defined by UIDAI.

Annexures

Annexure 1

Pickup list (Print Copy)

Print Report for

[Barcode – Batch ID, From and To Date, Total Number of Pages]]

Batch ID: (Registrar ID/EA code/Station Id/ddmmyy*)

Report for the period of

From Date :

To Date:*

Sr. No.	EID	No. of pages (Including Consent)
1	1111/11111/11111 20/06/2011 11:05:32	3
2		
..		
250		
Total Number of Pages		=Sum (1:250)

(The same will be printed for each batch & will be kept inside the respective boxes/polythene cover.

It is suggested that a pickup list / batch must be generated manually from a single machine once it completes 250 enrollments)

* Date will be the 'To Date' selected for batch generation. If 'To date' is not mentioned while creating the batch in enrolment software, by default it will take the yesterday's date.

Annexure 1 A

Pickup list (softfile generated from the machine)

Pickup list (CSV file to be exported from the machine and sent to DMS agency along with pickup request without any modifications)

Note: CSV file will have same name as the Batch ID.

Format of CSV file:

Sr. No.	EID	Enrolment Type	Verification Type	Relationship EID	*DOB	POI	POA	POR	No. of pages (Including Consent)
---------	-----	----------------	-------------------	------------------	------	-----	-----	-----	----------------------------------

	DMS Service Provider:		

Annexure 3

Batch numbering Format

Each batch is numbered using a unique Batch ID, this will enable effective trace and track of sensitive documents during transit and will also enable registrar as well as UIDAI to maintain record of each transaction.

A batch number should consist of following fields

1. Registrar Identification
2. EA Code
3. Station Code
4. Date, Month and Year*

Sample Batch id – 012/1234/12045/230411

1. First three digits represent three digit registrar identification number.
2. Next four digits will be the unique Enrolment Agency Code
3. Enrolment Station code
4. The third field indicated date in DDMMYY format*

The CSV File will be named with batch id (eg. 012123412045230411.csv)

* Date will be the 'To Date' selected for batch generation. If 'To date' is not mentioned while creating the batch in enrolment software, by default it will take the yesterday's date.

Multiple csv files will be zipped together for upload along with the pickup request, the naming format for zip files is as follows

Zip file Naming Format

1. Registrar Identification (3 digit numerical)
2. DHQ Location Code (2 digit alphabet, 2 digits numerical)
3. Date (DDMMYY)

Eg. 012AP01230411.zip

Annexure 4

Best Practices

Storage of Document

Enrolment document carries important and confidential resident information, UIDAI urges to handle enrolment documents with care and protect it from damage and theft. This section outlines some best practices for document handling at various stages.

2. Keep documents during enrolment in tray and do not fold them
3. Upon completion of enrolment, immediately collate the set of documents and staple it at left hand corner as shown in diagram
4. Store documents in proper box and avoid folding and excessive stacking
5. Protect documents from direct sun light, inflammable material, dust and water. It is recommended to use plastic covers to store set of documents to protect against environmental hazard
6. Transport documents from enrolment center to registrar office only in properly sealed boxes tagged with proper manifest and packing list
7. Avoid writing on documents, this may create confusion for operators in later phases of the process
8. Avoid tying up documents using rope or packing tapes directly, this will permanently damage documents, if tying up is unavoidable use PET Straps with edge protectors

Registrar office (DHQ)

1. Store documents/boxes indoor in a secured place to protect from fire, water and sabotage.
2. Keep the documents/boxes in a lockable place with proper ventilation till pickup by DMS service provider
3. Avoid movement of documents form storage area for quality check or master manifest preparation purpose
4. Avoid de-stapling, re-stapling or folding or excessive stacking of documents, it is recommended to store documents in boxes.

Annexure 5

List of District Head Quarters with code number to be used during sending Pickup request.
